

yymee Marketplace-Refurbished

1. Overview

yymee is an Indian online marketplace that connects buyers directly with home-based sellers, small manufacturers, artisans, and commercial stores.

PHASE 1 — LIVE MODEL

Buyers order directly via WhatsApp. The platform logs every “Order on WhatsApp” click to provide lead analytics and power seller monetization.

PHASE 2 — UPCOMING

Payment gateways, escrow payouts, Non Gst sellers and GST state-level filtering.

2. User Roles & Responsibilities

Role	Platform	Key Responsibility
Admin	apps/admin	Manages categories, verifies seller identities, and tracks WhatsApp click analytics.
Seller	apps/seller	Registers store, gets verified by Admin, and lists simple or multi-variant products.
Buyer	apps/buyer	Browses in Guest Mode, logs in via OTP, adds items to a single-seller cart, and orders on WhatsApp.

3. Phase 1 Features (In Scope)

A. Admin Application (apps/admin)

- **Category Management:** Create, edit, and organize 3-level categories (Main Department → Sub-category → Product Type).
- **Seller Verification:** Review pending seller registrations, inspect submitted identity proofs, and Approve or Reject/Freeze seller accounts.
- **WhatsApp Click Analytics:** Track total “Order on WhatsApp” clicks per seller and product for platform monetization (pay-per-lead or subscription tiers).
- **Banners:** Manage homepage promotional banners.

B. Seller Application (apps/seller)

- **Onboarding & Identity Submission:** Sign up with Phone + OTP, enter Store Name, Email, Password, WhatsApp Number, Location, Address, Bank Details, and submit Identity Proof (Govt ID / PAN / GST).
- **Account Status Gate:** Account remains in Pending Verification until approved by the Admin.

- **Product & Variant Manager:** List products under Admin categories:
 - Simple Products — Base price, weight, stock, MOQ, and image URLs.
 - Multi-Variant Products — Define attributes (Color, Size, Volume, Pack Size) to generate a combination matrix with custom prices, stock, and photos.

C. Buyer Application (apps/buyer)

- **Guest Mode Browsing:** Explore the full product catalog without logging in.
- **OTP Login:** Login via Mobile Number + OTP when adding items to cart or initiating an order.
- **Single-Seller Cart:** Cart restricts items to one seller at a time for a clean, single-merchant order message.
- **Delivery Address:** Input delivery details (Street, City, State, PIN code).
- **WhatsApp Order Button:** Generates a pre-filled order message and opens a direct WhatsApp chat with the seller.

4. Step-by-Step WhatsApp Order Flow

1. Buyer selects Product & Variants on Buyer App
2. Buyer logs in via Mobile OTP & enters Delivery Address
3. Buyer clicks “Order on WhatsApp”
4. System logs the Click Event (for Admin Monetization)
5. App opens WhatsApp with a pre-filled message directed to the Seller
6. Buyer and Seller finalize payment and delivery directly in WhatsApp chat

“Hi [Store Name], I want to order [Product Name] ([Variant], Qty: 1, Price: ₹499) to [Address]”

5. Monetization Model — Tiered Click & Listing Quota

A seller cannot list any product until Admin approves their identity proof — this is a one-time gate and is not tied to monetization. The moment identity is approved, the account is automatically placed on the Free plan, with no payment involved.

From there, the only way to raise either the click quota or the listing quota is to upgrade. When a seller hits either limit, that action locks and a subscription window opens showing the next tiers up.

Exception

If a seller submits a valid disability certificate and Admin verifies it, the account is granted full, unrestricted usage — unlimited WhatsApp clicks and unlimited product listings — with no subscription required.

Tier	WhatsApp Clicks	Product Listings	Price	Unlock Trigger
Free	20/month	3 products	₹0	Automatic — granted on identity verification approval
Standard	100/month	10 products	₹499/month	Admin approves after payment proof
Premium	500/month	50 products	₹1,499/month	Admin approves after payment proof
Extra Premium	Unlimited or 2,000+	200+ products	₹3,999/month	Admin approves after payment proof

Upgrade Flow

1. Seller hits their limit — either the click quota or product listing quota reaches zero.
2. The relevant action is blocked immediately — WhatsApp button greys out, or “Add Product” is disabled.
3. Subscription window opens automatically, showing available tiers above the seller’s current one.
4. Seller selects a tier and submits payment proof (UPI / bank transfer reference or screenshot).
5. Account enters Pending Upgrade Approval — existing limits stay frozen until Admin acts.
6. Admin reviews and approves or rejects, using the same queue pattern as seller identity verification.
7. On approval, the new tier’s quotas activate immediately and the billing cycle starts from the approval date.
8. On rejection, the seller stays on their current tier, remains blocked, and receives a reason with the option to resubmit.

Identity verification and plan upgrade are two separate gates in the seller lifecycle — identity verification is a one-time gate that unlocks the ability to sell at all, while plan upgrade is a repeatable gate that raises click/listing ceilings. Both use the same admin-approval pattern, but should be tracked as distinct request types (IdentityVerification vs. UpgradeRequest) so Admin is not reviewing unrelated approvals in one mixed queue.

6. Upcoming Features (Phase 2 Roadmap)

The following features are Out of Scope for Phase 1 and marked as “Coming Soon”:

Feature	Description
GST / Non-GST State Boundaries	Restricting non-GST sellers to intra-state visibility only
In-App Payment Gateway	Native online checkout supporting UPI, Cards, and NetBanking.
Escrow & Auto-Payouts	Holding buyer payments for a 7-day protection window and auto-depositing net payouts to seller bank accounts.
Native Returns & Refunds	In-app return shipping labels and return deficit tracking.
